DETAILED ACTION

This is a first office action in response to application no. 10/728,658 filed on December 6th 2003 in which claims 11-40 are presented for examination.

Claim Objections

1. Claim 17 is objected to because of the following informalities: The examiner suggests that the applicant amends the claim to read " A computing device having a computer readable memory medium storing.... Appropriate correction is required.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 11-40 are rejected on the ground of nonstatutory obviousness- type double patenting as being unpatentable over claims 1-30 of U.S. Patent no. 6,704,360 to Haskell et al. (US Patent no. 6704360).

Although the conflicting claims are not identical, they are not patentably distinct from each other because the limitations of claims 11-40 of the present application are included in the claims 1-30 of the cited Patent.

Therefore, it is considered obvious that one skilled in the art at the time of the invention having US Patent no. 6704360 would have had no difficulty to modify the conditions and the claim language set in claims 1-30 of the cited US Patent in order to derive the limitations of claims 11-40 of the present application for the same purpose of achieving efficient coding by integrating the bidirectional prediction modes of MPEG-1 and H.263 standards into a single adaptive scheme as taught by Haskell (See Haskell col. 2, lines 10-15)..

NOTE: The applicant is urged to review the claims of all co-pending applications in order to avoid the delay that a terminal disclaimer approval may cause.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shen et al. (US Patent no. 6043846) teaches prediction apparatus and method for improving coding efficiency in scalable video coding.
